Front-end developer with more than 5 years of experience in the software industry, with experience in national and international companies.

About me:

Introduction: I began my software development journey in 2017, leading to my first professional role in 2021. I am a passionate front-end developer with a strong focus on UI/UX, SEO, and web accessibility. While I have experience with a variety of programming languages, I specialize in JavaScript/TypeScript, Elm, CSS, and HTML.

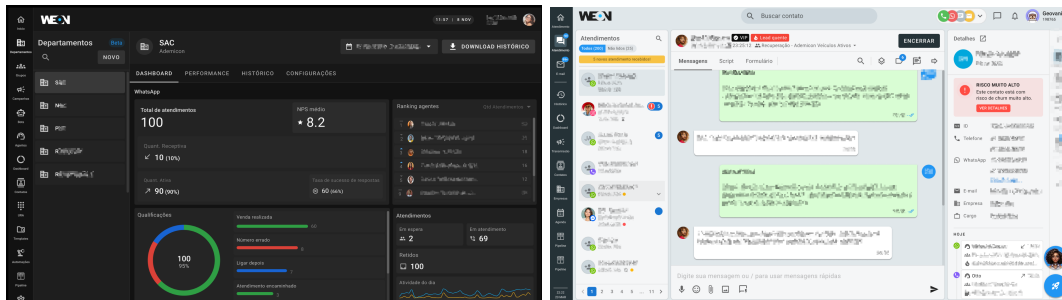

Professional Experience:

Materialize (Software Factory) - B2B

- **Title:** Front-end Engineer / Full-stack Developer
- **Period:** March 2025 - Current Job (1 year)
- **Description:** As a developer in a software factory setting, I contributed to the front-end and full-stack development of projects for multiple client companies, ensuring high-quality, feature-complete delivery.
- **Projects/Results:**
 - [Hoopr](#): Developed the front-end part of the project.
 - [Apassul](#): Built the front-end for a new internal management project.
 - Psiuapp: Developed the web platform and participated in the production of the mobile application. [Web Platform](#) [iOS App](#)
 - [Truss Intelligence](#): Contributed to the construction of three key features and platforms: Sensores boats, Widgets boats, and TMO mining management.
 - Other Projects: Developed for unpublished projects like Netgol-Certacom (a football social media for young players) and Economizer (an Airbnb-like platform).
